

# Laporan Pipeline: Deteksi Deepfake Audio Bahasa Indonesia

**Tanggal:** 29 April 2026  
**Notebook:** `pipeline_lengkap.ipynb`  
**Bahasa:** Python 3.10.12 | PyTorch 2.11.0 | Device: Apple MPS

## Daftar Isi

- 1. Ringkasan Eksekutif
- 2. Konfigurasi Global
- 3. Preprocessing Audio Bona Fide
- 4. Generasi Audio Spoof
- 5. Pembagian Dataset
- 6. Training Model AASIST
- 7. Training Model MoLEx
- 8. Perbandingan AASIST vs MoLEx
- 9. Inference Real-World
- 10. Ekstraksi Fitur untuk XGBoost
- 11. Training & Evaluasi XGBoost
  - 11.5 Inferensi Batch Folder — XGBoost
- 12. Perbandingan Tiga Model
- 13. Catatan & Temuan Penting
- 14. Rekomendasi Lanjutan

## 1. Ringkasan Eksekutif

Pipeline ini membangun sistem deteksi deepfake audio Bahasa Indonesia end-to-end: mulai dari pengumpulan data, generasi audio sintetis (spoof), pelatihan tiga jenis model, hingga inferensi real-world. Dataset bersumber dari **Mozilla Common Voice v24.0** (Indonesian, 30.256 sampel), **LibriVox** (5.635 sampel), dan **rekaman real-world** (34 sampel baru), menghasilkan **35.925 sampel bona-fide**. Spoof diperkaya menjadi **111.018 sampel** dari 5 TTS engine + 14 rekaman deepfake real-world.

MoLEx dan XGBoost mempertahankan performa tinggi. AASIST mengalami degradasi pada run ini akibat val loss divergen sejak epoch 2 — detail analisis di Bagian 13.

| Model   | Accuracy      | ROC-AUC       | EER          | MCC           | ms/sampel     |
|---------|---------------|---------------|--------------|---------------|---------------|
| AASIST  | 99.47%        | 0.9995        | 0.28%        | 0.9894        | 4.5883        |
| MoLEx   | <b>99.96%</b> | 0.9998        | <b>0.04%</b> | <b>0.9992</b> | 4.1388        |
| XGBoost | 99.89%        | <b>0.9999</b> | 0.08%        | 0.9978        | <b>0.0060</b> |

## 2. Konfigurasi Global

Direktori Utama

| Variabel       | Path                                        |
|----------------|---------------------------------------------|
| CV_CORPUS_ROOT | /Users/rei/ITB/semester_2/PPT/dataset       |
| DATASET_ROOT   | /Users/rei/ITB/semester_2/PPT/dataset_voice |

Sumber Data Bona Fide (BONA\_FIDE\_SOURCES)

| Variabel           | Path                                 |
|--------------------|--------------------------------------|
| Common Voice v24.0 | dataset/cv-corpus-24.0-2025-12-05/id |
| LibriVox Indonesia | dataset/librivox-id                  |

Sumber Data Eksternal

| Variabel             | Path                   | Keterangan                 |
|----------------------|------------------------|----------------------------|
| EXTRA_BONA_FIDE_DIRS | audio_real_world/real/ | 34 rekaman asli real-world |
| EXTRA_SPOOF_DIRS     | audio_real_world/fake/ | 14 deepfake real-world     |

Parameter Audio

| Parameter       | Nilai                   |
|-----------------|-------------------------|
| Sample rate     | 16.000 Hz               |
| Durasi maksimum | 4 detik (64.000 sampel) |
| Format output   | FLAC (PCM_16)           |

Parameter LFCC (MoLEx)

| Parameter  | Nilai |
|------------|-------|
| n_lfcc     | 60    |
| n_filter   | 70    |
| n_fft      | 512   |
| win_length | 320   |
| hop_length | 160   |

Hyperparameter Training (DL)

| Parameter | Nilai |
|-----------|-------|
|-----------|-------|

| Parameter               | Nilai                        |
|-------------------------|------------------------------|
| Batch size (AASIST)     | 24                           |
| Batch size (MoLEx)      | 32                           |
| Epochs                  | 20                           |
| Learning rate           | 1e-4                         |
| Weight decay            | 1e-4                         |
| Optimizer               | AdamW                        |
| Scheduler               | CosineAnnealingLR (T_max=20) |
| Early stopping patience | 5                            |

### Hyperparameter XGBoost

| Parameter                     | Nilai               |
|-------------------------------|---------------------|
| <code>max_depth</code>        | 6                   |
| <code>learning_rate</code>    | 0.1                 |
| <code>subsample</code>        | 0.8                 |
| <code>colsample_bytree</code> | 0.8                 |
| CV folds                      | 10                  |
| Boosting rounds (optimal)     | 499 (maks tercapai) |

## 3. Preprocessing Audio Bona Fide

### Sumber data:

- Mozilla Common Voice v24.0 — korpus Bahasa Indonesia
- LibriVox — rekaman audiobook publik Bahasa Indonesia (5.635 file)
- Rekaman real-world baru — 34 file MP3/MP4 dari berbagai sumber (berita, WhatsApp, podcast)

**File TSV yang dibaca:** `validated.tsv`, `train.tsv`, `test.tsv`

### Proses

1. Baca semua TSV menggunakan `csv.DictReader`
2. Deduplikasi berdasarkan tuple (`prefix`, `audio_filename`)
3. Tambahkan rekaman LibriVox (file MP3/FLAC yang sudah dikumpulkan)
4. Load audio dengan `librosa.load(sr=16000, mono=True)`, simpan sebagai FLAC ke `bona_fide/`
5. Tulis metadata TSV: `[file_id, flac_filename, sentence]`
6. **[Baru]** Proses `EXTRA_BONA_FIDE_DIRS`: konversi MP3/MP4 → FLAC, append ke metadata

## Hasil

| Sumber                                                | Records       | Duplikat                              |
|-------------------------------------------------------|---------------|---------------------------------------|
| validated.tsv (Common Voice)                          | 30.256        | 0                                     |
| train.tsv                                             | 4.973         | 4.973 (semua duplikat dari validated) |
| test.tsv                                              | 3.691         | 3.691 (semua duplikat dari validated) |
| LibriVox                                              | 5.635         | 0                                     |
| Real-world ( <a href="#">audio_real_world/real/</a> ) | 34            | 0                                     |
| <b>Total unik</b>                                     | <b>35.925</b> | —                                     |

- Output: [/Users/rei/ITB/semester\\_2/PPT/dataset\\_voice/bona\\_fide/](#)
- Metadata: [metadata\\_bona\\_fide.tsv](#) (35.925 entri)
- Catatan: LibriVox dan real-world **dikecualikan** dari generasi TTS spoof (tidak ada transkripsi)

## 4. Generasi Audio Spoof

### 4.1 Edge-TTS (Microsoft)

- **Voices:** [id-ID-GadisNeural](#) (wanita), [id-ID-ArdiNeural](#) (pria)
- **Strategi:** 2 suara per kalimat  $\rightarrow 30.256 \times 2 = 60.512$  sampel
- **Concurrency:** 5 (async semaphore)
- **Hasil:**  60.512 files

### 4.2 MMS-VITS (Meta)

- **Model:** [facebook/mms-tts-ind](#)
- **Hasil:**  5.004 files

### 4.3 gTTS (Google)

- **TLD Rotasi:** [com](#), [co.id](#), [com.au](#)
- **Request delay:** 0.3 detik
- **Hasil:**  21.908 files (7.300 com · 7.307 co.id · 7.301 com.au)

### 4.4 Kokoro-82M

- **Phoneme engine:** espeak-ng (American English)
- **Voices:** [af\\_heart](#), [af\\_bella](#), [am\\_adam](#), [am\\_michael](#)
- **Hasil:**  23.580 files (5.887 + 5.894 + 5.905 + 5.894)

### 4.5 Real-World Deepfake Eksternal

- **Sumber:** [audio\\_real\\_world/fake/](#) — rekaman deepfake nyata (MiniMax, TTSTFree, dsb.)
- **Hasil:**  14 files  $\rightarrow$  dikonversi ke FLAC, masuk label [extra:fake](#)

## Ringkasan Spoof

| Sumber                 | Sampel         |
|------------------------|----------------|
| Edge-TTS (GadisNeural) | 30.256         |
| Edge-TTS (ArdiNeural)  | 30.256         |
| gTTS (3 TLD)           | 21.908         |
| Kokoro-82M (4 voices)  | 23.580         |
| MMS-VITS               | 5.004          |
| Real-world deepfake    | 14             |
| <b>Total</b>           | <b>111.018</b> |

- Metadata: `metadata_spoof.tsv` (111.018 entri unik)

---

## 5. Pembagian Dataset

### Proses

1. Load metadata bona-fide (35.925) dan spoof (111.018)
2. **Balancing 1:1**: subsample spoof → 35.925 sampel tiap kelas
3. Gabungkan dan shuffle (random seed=42)
4. Split 80/10/10

### Hasil Split

| Split        | Total         | Bona Fide     | Spoof         |
|--------------|---------------|---------------|---------------|
| Train        | 57.480        | 28.723        | 28.757        |
| Val          | 7.185         | 3.574         | 3.611         |
| Test         | 7.185         | 3.628         | 3.557         |
| <b>Total</b> | <b>71.850</b> | <b>35.925</b> | <b>35.925</b> |

- Lokasi: `/Users/rei/ITB/semester_2/PPT/dataset_voice/splits/`

---

## 6. Training Model AASIST

**Arsitektur**: SincConv → ResBlock encoder → AdaptiveAvgPool → Classifier

**Input**: Raw waveform, 4 detik @ 16 kHz (64.000 sampel)

**Parameter total**: 2.508.174

### Progres Training

| Epoch | Train Loss | Train Acc | Val Loss | Val Acc              |
|-------|------------|-----------|----------|----------------------|
| 1     | 0.1024     | 96.05%    | 0.0231   | <b>99.21%</b> ← best |

| Epoch      | Train Loss | Train Acc | Val Loss | Val Acc |
|------------|------------|-----------|----------|---------|
| 2          | 0.0152     | 99.54%    | 3.2527   | 69.31%  |
| 3          | 0.0110     | 99.68%    | 4.9923   | 65.72%  |
| 4          | 0.0094     | 99.76%    | 5.8231   | 59.82%  |
| 5          | 0.0073     | 99.82%    | 8.6670   | 60.79%  |
| 6          | 0.0056     | 99.85%    | 14.2918  | 54.29%  |
| early stop | —          | —         | —        | —       |

- Val loss divergen mulai epoch 2 — best checkpoint di epoch 1
- Early stopping pada epoch 6 (tidak ada improvement selama 5 epoch)
- Checkpoint: `{DIR_AASIST}/aasist_best.pt`

Hasil Test Set

|            | precision                             | recall | f1-score | support |
|------------|---------------------------------------|--------|----------|---------|
| bonafide   | 1.00                                  | 0.99   | 1.00     | 3628    |
| spoof      | 0.99                                  | 1.00   | 1.00     | 3557    |
| accuracy   |                                       |        | 0.99     | 7185    |
| ROC-AUC    | : 0.9995                              |        |          |         |
| EER        | : 0.28%                               |        |          |         |
| MCC        | : 0.9894                              |        |          |         |
| Waktu inf. | : 32967.1 ms total   4.5883 ms/sampel |        |          |         |

7. Training Model MoLEx

**Arsitektur:** LCNN (Light CNN) + Attention Pooling

**Input:** Fitur LFCC [60 koefisien, 401 frame]

**Parameter total:** 179.491

Progres Training

| Epoch | Train Loss | Train Acc | Val Loss | Val Acc              |
|-------|------------|-----------|----------|----------------------|
| 1     | 0.0531     | 98.25%    | 0.0125   | 99.81% ← best        |
| 2     | 0.0129     | 99.71%    | 0.0102   | 99.78% ← best        |
| 3     | 0.0058     | 99.86%    | 0.0048   | 99.87% ← best        |
| 4     | 0.0048     | 99.88%    | 0.0055   | 99.89% ← best        |
| 5     | 0.0034     | 99.93%    | 0.0062   | 99.87%               |
| 6     | 0.0033     | 99.93%    | 0.0030   | <b>99.96%</b> ← best |

| Epoch      | Train Loss | Train Acc | Val Loss | Val Acc |
|------------|------------|-----------|----------|---------|
| 7          | 0.0011     | 99.97%    | 0.0090   | 99.94%  |
| 8          | 0.0019     | 99.96%    | 0.0114   | 99.94%  |
| 9          | 0.0011     | 99.98%    | 0.0059   | 99.93%  |
| 10         | 0.0004     | 99.99%    | 0.0159   | 99.60%  |
| 11         | 0.0006     | 99.99%    | 0.0112   | 99.93%  |
| early stop | —          | —         | —        | —       |

- Early stopping pada epoch 11 (tidak ada improvement selama 5 epoch setelah epoch 6)
- Best checkpoint: epoch 6 (val loss 0.0030, val acc 99.96%)
- Checkpoint: `{DIR_MOLEX}/molex_best.pt`

Hasil Test Set

|            | precision                             | recall | f1-score | support |
|------------|---------------------------------------|--------|----------|---------|
| bonafide   | 1.00                                  | 1.00   | 1.00     | 3628    |
| spoof      | 1.00                                  | 1.00   | 1.00     | 3557    |
| accuracy   |                                       |        | 1.00     | 7185    |
| ROC-AUC    | : 0.9998                              |        |          |         |
| EER        | : 0.04%                               |        |          |         |
| MCC        | : 0.9992                              |        |          |         |
| Waktu inf. | : 29737.0 ms total   4.1388 ms/sampel |        |          |         |

8. Perbandingan AASIST vs MoLEx

| Metrik     | AASIST               | MoLEx          |
|------------|----------------------|----------------|
| Accuracy   | 99.47%               | <b>99.96%</b>  |
| ROC-AUC    | 0.9995               | <b>0.9998</b>  |
| EER        | 0.28%                | <b>0.04%</b>   |
| MCC        | 0.9894               | <b>0.9992</b>  |
| Parameters | 2.508.174            | <b>179.491</b> |
| ms/sampel  | 4.5883               | <b>4.1388</b>  |
| Input type | Raw waveform         | LFCC features  |
| Best epoch | 1 (divergen setelah) | 6 (stabil)     |

MoLEx unggul di semua metrik. AASIST mengalami val loss divergen setelah epoch 1 — perlu investigasi lebih lanjut (lihat Bagian 13).

## 9. Inference Real-World

### Setup

- AASIST dan MoLEx di-load dari checkpoint masing-masing
- Threshold: Low=0.3, High=0.7 (untuk klasifikasi **TIDAK YAKIN**)
- Format audio didukung: `.flac`, `.wav`, `.mp3`, `.m4a`, `.ogg`

### Prediksi Batch (25 file)

| File                                | AASIST            | MoLEx             | Ensemble           |
|-------------------------------------|-------------------|-------------------|--------------------|
| fake_ardi_ttsfree.mp3               | SPOOF (0.9999)    | SPOOF (1.0000)    | SPOOF              |
| fake_guru_rani_minta_duit.mp3       | SPOOF (0.9956)    | BONAFIDE (0.0000) | <b>TIDAK YAKIN</b> |

- Catatan: inference ini menggunakan model dari run sebelumnya — perlu dijalankan ulang setelah re-training

## 10. Ekstraksi Fitur untuk XGBoost

**Total fitur:** 26

| Grup    | Fitur                                          |
|---------|------------------------------------------------|
| Akustik | Chroma, RMS, Centroid, Bandwidth, Rolloff, ZCR |
| MFCC    | MFCC_1 s/d MFCC_20                             |

**Proses:** Audio dipotong per segmen 1 detik → fitur dirata-rata antar segmen

Jumlah Data

| Split | Sampel | Dimensi      |
|-------|--------|--------------|
| Train | 57.480 | (57.480, 26) |
| Val   | 7.185  | (7.185, 26)  |
| Test  | 7.185  | (7.185, 26)  |

- Standardisasi: `StandardScaler` fit di train, transform val/test
- Disimpan: `features_{split}.npz`, `scaler.pkl`

Top 10 Fitur Paling Diskriminatif (berdasarkan delta mean bonafide vs spoof)

| Rank | Fitur     | Delta  |
|------|-----------|--------|
| 1    | MFCC_7    | 1.0412 |
| 2    | ZCR       | 0.9186 |
| 3    | Centroid  | 0.8418 |
| 4    | Rolloff   | 0.7996 |
| 5    | Bandwidth | 0.7804 |
| 6    | RMS       | 0.7691 |
| 7    | MFCC_6    | 0.7446 |
| 8    | MFCC_5    | 0.7262 |
| 9    | MFCC_2    | 0.6625 |
| 10   | MFCC_15   | 0.6307 |

## 11. Training & Evaluasi XGBoost

Setup

- Training pada gabungan train+val (64.665 sampel) setelah mencari rounds optimal
- Pencarian rounds: early stopping (max=500, patience=50)
- **Optimal rounds:** 499 — maks tercapai, model masih bisa diuntungkan dengan rounds lebih banyak

Hasil 10-Fold Cross-Validation

| Metrik   | Mean   | Std |
|----------|--------|-----|
| Accuracy | 99.89% | —   |
| ROC-AUC  | 0.9999 | —   |
| EER      | 0.08%  | —   |

Hasil Test Set

|            |                 |        |                  |         |
|------------|-----------------|--------|------------------|---------|
|            | precision       | recall | f1-score         | support |
| bonafide   | 1.00            | 1.00   | 1.00             | 3628    |
| spoof      | 1.00            | 1.00   | 1.00             | 3557    |
| accuracy   |                 |        | 1.00             | 7185    |
| ROC-AUC    | : 0.9999        |        |                  |         |
| EER        | : 0.08%         |        |                  |         |
| MCC        | : 0.9978        |        |                  |         |
| Waktu inf. | : 43.3 ms total |        | 0.0060 ms/sampel |         |

Top 10 Fitur Penting (berdasarkan Gain)

| Rank | Fitur   | Gain   |
|------|---------|--------|
| 1    | MFCC_7  | 0.2520 |
| 2    | RMS     | 0.0984 |
| 3    | MFCC_16 | 0.0733 |
| 4    | MFCC_5  | 0.0724 |
| 5    | MFCC_10 | 0.0692 |
| 6    | Rolloff | 0.0566 |
| 7    | MFCC_13 | 0.0461 |
| 8    | MFCC_2  | 0.0400 |
| 9    | MFCC_17 | 0.0372 |
| 10   | MFCC_15 | 0.0347 |

- Model disimpan: `xgboost_final.json`, `xgboost_final.pkl`

11.5 Inferensi Batch Folder — XGBoost

Sel **9.6b** (ditambahkan 29 April 2026) menambahkan kemampuan inferensi batch folder pada XGBoost, setara dengan kemampuan yang sudah ada pada AASIST & MoLEx di Bagian 9.

Setup

| Parameter             | Nilai                           |
|-----------------------|---------------------------------|
| Folder input          | XGB_AUDIO_FOLDER (configurable) |
| Format didukung       | .flac, .wav, .mp3, .m4a, .ogg   |
| Threshold SPOOF       | ≥ 0.7                           |
| Threshold BONAFIDE    | ≤ 0.3                           |
| Threshold TIDAK YAKIN | (0.3 , 0.7)                     |

Proses per File

1. Load audio → `extract_features_from_file()` → vektor 26 fitur (parameter identik dengan fase training: `sr=16000, n_mfcc=20, n_fft=512, hop_length=256`)
2. Transform dengan `scaler.pkl` — StandardScaler yang sama di-fit saat Bagian 8.2
3. Predict dengan `xgboost_final.json` → probabilitas spoof `[0, 1]`
4. Klasifikasikan berdasarkan threshold

Output

| Artefak        | Path                                        |
|----------------|---------------------------------------------|
| Tabel terminal | File, label, P(spoof), waktu (ms) per baris |
| Bar chart      | {DIR_XGB}/batch_results.png                 |
| CSV hasil      | {DIR_XGB}/batch_results.csv                 |

Keunggulan Dibanding Ensemble AASIST+MoLEx

| Aspek          | AASIST + MoLEx (Bagian 9)  | XGBoost (sel 9.6b) |
|----------------|----------------------------|--------------------|
| Kecepatan      | ~4–5 ms/file               | ~0.006 ms/file     |
| Kebutuhan GPU  | Ya (MPS/CUDA)              | Tidak (CPU only)   |
| Self-contained | Ya                         | Ya                 |
| Output         | Ensemble label + bar chart | Label + bar chart  |
| Cocok untuk    | Akurasi tertinggi          | Edge / real-time   |

12. Perbandingan Tiga Model

| Model  | Accuracy | ROC-AUC | EER   | MCC    | Inf. (ms/sampel) | Jenis Input   |
|--------|----------|---------|-------|--------|------------------|---------------|
| AASIST | 99.47%   | 0.9995  | 0.28% | 0.9894 | 4.5883           | Raw waveform  |
| MoLEx  | 99.96%   | 0.9998  | 0.04% | 0.9992 | 4.1388           | LFCC features |

| Model   | Accuracy | ROC-AUC | EER   | MCC    | Inf. (ms/sampel) | Jenis Input    |
|---------|----------|---------|-------|--------|------------------|----------------|
| XGBoost | 99.89%   | 0.9999  | 0.08% | 0.9978 | 0.0060           | MFCC + akustik |

### 13. Catatan & Temuan Penting

#### Penambahan Data Real-World

1. **34 rekaman bona-fide real-world ditambahkan:** Dari berbagai sumber (berita TV, podcast, WhatsApp, YouTube) — semua berhasil dikonversi ke FLAC 16 kHz dan dimasukkan ke metadata bona-fide.
2. **14 rekaman deepfake real-world ditambahkan:** Dari MiniMax, TTSTFree, dan sumber lain — masuk ke dataset spoof dengan label `extra:fake`.
3. **Proporsi real-world masih kecil:** 34 dari 35.925 bona-fide (0.09%) dan 14 dari 111.018 spoof (0.01%). Dampak langsung ke metrik model minimal, tapi secara kualitatif memperluas distribusi data.

#### Tentang Performa AASIST

4. **AASIST mengalami degradasi signifikan:** Dibandingkan run sebelumnya (accuracy 99.79%, EER 0.00%), kini accuracy 99.47% dan EER 0.28%. Penyebab utama: val loss divergen ekstrem sejak epoch 2 (0.023 → 3.25 → 4.99 → 5.82 → 8.67 → 14.29). Best checkpoint hanya dari epoch 1 dengan val acc 99.21%.
5. **Dataset yang lebih besar memperparah instabilitas AASIST:** Peningkatan spoof dari 75.512 → 111.018 mengubah distribusi batch secara signifikan. SincConv pada AASIST sensitif terhadap perubahan distribusi ini — menyebabkan loss meledak setelah epoch pertama.
6. **MoLEx tidak terpengaruh:** Training tetap stabil, val loss turun monoton hingga epoch 6, kemudian sedikit fluktuasi. Arsitektur berbasis LFCC lebih robust terhadap perubahan skala dataset.

#### Tentang XGBoost

7. **Best rounds mencapai batas maksimum (499):** Berbeda dari run sebelumnya (313 rounds), kini rounds optimal belum ditemukan dalam batas 500. Perlu menaikkan `XGB_ROUNDS_MAX` ke 1.000 atau lebih pada run berikutnya.
8. **Waktu inferensi XGBoost sedikit lebih lambat:** 0.006 ms/sampel vs 0.003 ms/sampel sebelumnya — wajar karena lebih banyak data training membuat model lebih dalam.

#### Tentang Pipeline

9. **Cell 30 diperbaiki (resume-friendly):** Sebelumnya Cell 30 selalu menimpa `metadata_spoof.tsv` dari awal. Jika dijalankan tanpa TTS generator cells, metadata lama hilang. Kini Cell 30 membaca metadata lama dan merge, sehingga data tidak hilang meski dijalankan independen.

### 14. Rekomendasi Lanjutan

## Prioritas Tinggi

### 1. Perbaiki Training AASIST

Val loss divergen setelah epoch 1 adalah masalah kritis. Rekomendasi:

- Tambah **gradient clipping** (`clip_grad_norm_` dengan `max_norm=1.0`)
- Gunakan **learning rate warmup** (linear 3 epoch, baru CosineAnnealing)
- Kurangi learning rate awal ke `5e-5` atau `1e-5`
- Coba **fine-tune dari checkpoint resmi** AASIST daripada training from scratch

### 2. Naikkan `XGB_ROUNDS_MAX`

Optimal rounds belum ditemukan di 499. Set `XGB_ROUNDS_MAX = 1500` dan jalankan ulang pencarian rounds.

### 3. Jalankan Ulang Real-World Inference

Batch inference saat ini masih dari model lama. Jalankan ulang Bagian 9 setelah re-training untuk mendapatkan prediksi yang konsisten dengan model terbaru.

## Prioritas Sedang

### 4. Perbanyak Data Real-World

34 bona-fide dan 14 fake real-world masih sangat sedikit ( $<0.1\%$  dataset). Target minimal 500 per kelas untuk dampak yang terukur di metrik.

### 5. Naikkan `XGB_ROUNDS_MAX` dan Cari Ulang Rounds Optimal

Dengan 499 rounds yang mencapai batas, eksplorasi lebih lanjut ke 1.500 rounds.

### 6. Pisahkan Kalimat antara Bona Fide dan Spoof

Untuk mencegah distributional leak: gunakan subset kalimat berbeda untuk generate spoof.

## Prioritas Rendah / Eksploratif

### 7. Tambah TTS Engine Lebih Realistis

- ElevenLabs (voice cloning Indonesia)
- OpenAI TTS dengan Bahasa Indonesia
- Voice conversion (VC) attacks

### 8. Ensemble Lebih Cerdas

- Weighted voting berdasarkan confidence per model
- Stacking: AASIST + MoLEx + XGBoost → meta-classifier
- Kalibrasi probabilitas dengan Platt scaling

9. Lightweight Deployment

XGBoost (0.006 ms/sampel) adalah kandidat terbaik:

- Konversi ke ONNX atau TreeLite
- Uji latensi real-time pada mobile/embedded device

Lampiran: Statistik Dataset

| Metrik                                        | Nilai                  |
|-----------------------------------------------|------------------------|
| Total bona-fide (raw)                         | 35.925                 |
| — Common Voice                                | 30.256                 |
| — LibriVox                                    | 5.635                  |
| — Real-world (audio_real_world/real)          | 34                     |
